

GIT CHALLENGE

For this challenge, you must create a whole GitFlow branch strategy on GitHub using the following guide <https://github.com/andresrey/git-flow-exercise>

Please consider the following during the challenge:

- You need to fork your own copy from the guide's git repository
- You are on your own for this challenge, so you will have to complete all the steps on the guide regardless of the role specified.
- For the pull request and approval steps use your own fork to do all the job. Also, you must do **ALL** the feature branches instead of just pick a single writer.
- Keep a clear branch history on your repository. You are allowed to break the golden rule of rebase if you need to fix any mistake on the public branches.
- If you have any questions about the challenge and you didn't find the answer on the Git basics presentation bibliography; feel free to ask them to Andrés Romero or your mentor.

You will have the challenge presentation with your mentor on Jan. 21th at 4:00 P.M. Together you will check the network graph of your fork and they will ask several questions about the process, so you should be able to respond to any change done on your repository.

Good luck!
